

Mortise Cylinder Lock Tap & Die Set

When mortise cylinders and lock cases are new they screw together without a problem. Often times a mortise cylinder is forced out of a lock without loosening the retaining screw. Other times an inexperienced person will force a mortise cylinder into a lock crooked. These actions result in stripping the threads of the cylinder or the lock case itself. The HPC **Mortise Cylinder Lock Tap & Die Set** was designed to repair this type of damage. **The Tap can be easily twisted into a stripped lock case** cutting new usable threads into an otherwise ruined lock. The Holding Fixture **secures a stripped mortise cylinder in your vise** while you use the die to repair the threads. The tap and die are also available separately.
