## IDH MAX ${ }^{\circledR}$ - INTRODUCTION

The IDH M AX ${ }^{\circledR}$ from Stanley Security Solutions offers convenience and effic iency for your electrified lock applications. Instead of installing reader devices, installing electrified strikes, installing door contacts and installing request-to-exit devices, you can now install the IDH MAX ${ }^{\circledR}$ in cylindrical or mortise lock applic ations. With IDH M AX ${ }^{\circledR}$ all of the formerly separate equipment needed to control access are selfcontained in a single installation. The complexity of multiple wire runs is drastically reduced.
You can let Stanley Security Solutions show you how to M AXimize your access control system with the IDH MAX® For the name and location of your local office, visit our web site at www.bestaccess.com. IDH MAX ${ }^{\circledR}$ and W series locks are compatible with Stanley's NT500, B.A.S.I.S. and most other Access Control Systems. The IDH M ax ${ }^{\circledR} 1300$ option will only work with the B.A.S.I.S. system and only on electrically unlocked "EU" functions.

## IDH MAX ${ }^{\circ}$ FEATURES

## IDH Max ${ }^{8}$ Features

- Includes latch status, door status and request to exit features NOTE: Latch Status not available on Deadbolt functions
- The 1300 option eliminates the need for a PIM (Panel Interface M odule)
- Requires only one 4 conductor wire run
- Reduces number of components installed and visible at the door (PIR, RQE push buttons and door contacts)
- Installation time is reduced
- The RQE switch senses the inside lever/knob rotation.
- All of the door components are housed in one manufacturer's hardware
- With the elimination of components, only the lockset is visible at the door
- The reader is integrated into the lockset escutcheon
- Available in magnetic stripe and proximity readers
- Available in all popular lever/knob styles and finishes
- Operates with BEST interchangeable core as a mechanical override
- Integrates with many manufacturer's on-line EAC equipment

## Mortise Features

- Lock case meets the requirements as listed in the ANSI/BHM A A156.13 standard for Series 1000, Grade 1 Operational and Grade 2 Security locks
- UL listed for GYQS Electrically controlled single point locks or latches for use on 3 hr , A label doors ( $4^{\prime} \times 10^{\prime}$ ). The listing applies for both U.S. and Canadian applications
- Door contact, request-to-exit, and latch status sensors positioned inside lock case
- The door contact magnet is installed behind the strike and out of site (except when deadbolt option is ordered)
- All sensors are standard in IDH M ax mortise locks
- The heavy duty design of the mortise lock results in less field maintenance and part failures

## Mortise Features (continued)

- Tw ist off lever spindle design protect internal lock parts from damage and failure.
- Oil impregnated stainless steel $3 / 4$ " anti-friction latchbolt reduces door closing force and wear.

## Cylindrical Features

- Non-handed levers allow for ease of installation
- Lock chassis meets the requirements as listed in the ANSI/BHM A A 156.2, standard for Series 4000 Grade 1 locks
- UL listed for GYQS Electrically controlled single point licks or latches for use on 3 hr , A label single doors ( $4^{\prime} \times 10^{\prime}$ ) GYJ B. The listing applies for both U.S. and Canadian applications
- Request-to-exit sensor positioned inside lock trim
- The ISC (Intelligent System Controller) is embedded behind the escutcheon secured and out of site
- Request-to-exit and door contact sensors are standard in IDH MAX cylindrical locks

## Magnetic Stripe Electronic Lock Features

- Durable material has teflon-like characteristics for increased life and wear resistance
- Variable read rate allows for easy usage

## Proximity Card Reader Features

- HID and M otorola/Indala proximity cards supported
- Usable in most environmental/exterior applications.

## 1300 Option Features

- Eliminates need for small panel interface module
- Eliminates reader interface board
- Incorporates 3 modules into a single electronics board inside IDH M ax escutcheon trim
- Connects directly to ACP via 2 wire RS485 connection

FIF
C

1. Prep door for IDH M AX ${ }^{\text {© }}$
2. Run single 4 conductor wire for IDH MAX ${ }^{\circledR}$
3. Install IDH M AX ${ }^{\circledR}$
4. Install electrified hinge
5. M ount PIM

* Operates with most control panel hardw are, including B.A.S.I.S. control panels.

IDH M AX ${ }^{\circledR} 1300$

1. Prep door for IDH MAX ${ }^{\circledR}$
2. Run single 4 conductor wire for IDH MAX ${ }^{\circledR} 1300$
3. Install IDH M AX ${ }^{\circledR} 1300$ which includes Intelligent System
4. Install electrified hinge
** Operates with B.A.S.I.S. control panels only.

AL- Besides complying with a wide variety of accessibility codes and ordinances, lever handles are available with a special abrasive feature. Abrasive strip on the lever immediately identifies warnings on doors to hazardous areas for the blind.
BRK- When excessive force (approx. 300 inch lbs.) is applied to \#4, \#6 keyed knobs, they "breakaway" and spin freely, thus allowing entrance only by key. Simple part replacement returns lock to functional usage.
C- The easy to use quick connect system enables efficient installation to the respective BEST Lock electrical options ordered.
IDH- The Integrated Door Hardware groups three components into one hardware package. 1. Door status switch (normally closed)
2. Request-to-Exit switch (normally open) 3. Electrically controlled locking mechanism.

KNL- Knurl feature is available only on \#6 knobs. The knurling is machined into the outer edge of the knob. The knurled feature can be used for blind, safety, or accessibility applications.
LL- Lead lined feature can be used to protect against X-rays. Since the majority of lead lined doors contain the lead in the surface of the door, the knob lockset provide lead lining for the holes cut in the door when preparing the door for the trim.
LM - The Lost M otion feature allows the lever handle to turn freely when it is locked without retracting the latchbolt assembly. This feature makes over-torque abuse more difficult to achieve.
SH- Security head provided for all exposed screws.
RQE- Cylindrical or M ortise locksets can be supplied with a request-to-exit switch. A normally open switch provides momentary sw itch closure when the inside lever/knob is rotated.
TAC- Grooves are machined into knobs to improve grip or to be used as a warning in hazardous areas. This option can be used for blind, safety or accessibility applications.
Thick door- Specify thickness if other than $13 / 4^{\prime \prime}$.
TL- Tactile levers may be used in areas where improved grip is required or as a warning in hazardous or Safety First areas. Grooves are machined into the back of the hand grasp portion of the lever to improve grip and/or provide a sensory warning. This option can be used for blind, safety, or accessibility applications.
1300- Integrated BAS1300/LNL1300 reader electronics board or (ISC) Intelligent System Controller is embedded behind the escutcheon secured and out of site. Functions with B.A.S.I.S./M ercury on-line equipment only.
NOTE: 1300 option not available on any "EL" electrically locked functions.

## 4OHM IDH MAX - SPECIFICATIONS

## MECHANICAL

Case- Heavy wrought steel, $57 / 8^{\prime \prime} \mathrm{H} \times 4 \not 1 / 4^{\prime \prime} \mathrm{D} \times 1^{\prime \prime} \mathrm{W}$ steel parts are zinc dichromate plated for corrosion protection.
Faceplate- Brass or bronze, 8 " H x $1114^{\prime \prime} \mathrm{W}$ x $1116^{\prime \prime}$ T . Lock face automatic ally adjusts to proper bevel during installation.
Strike- Brass, bronze or stainless steel base material, $47 / 8^{\prime \prime} \mathrm{H} \times 11 / 4^{\prime \prime} \mathrm{Wx} 3 / 32^{\prime \prime} \mathrm{T}$.
Fits standard door frame cut out as specified in ANSI A115.1. Universal (non-handed) strike supplied standard with lock.
Backset: $2^{3 / 4} 4^{\prime \prime}$
Door thickness- For doors $13 / 4^{\prime \prime}-3^{\prime \prime}$ thick. (specify thickness when ordering)
Installation- Lock requires modified door prep to mount the trim. Faceplate dimensions fit standard door preparation as specified in ANSI A115.1,.
Lockset is easily reversible to match door handing without opening the mortise case.
Latchbolt- Solid stainless steel, $3 / 4^{\prime \prime}$ throw. Latch is oil-impregnated for anti-friction operation.
Reversible without opening case.
Deadbolt- Solid stainless steel, 1" throw.
Auxiliary bolt- Stainless steel, non-handed.
Escutcheons: $10 \frac{1}{2} 2^{\prime \prime} \mathrm{H} \times 3^{5 / 16^{\prime \prime}} \mathrm{W} \times 1^{\prime \prime} \mathrm{D}\left(1^{\prime \prime}\right.$ at the top, sloping down to $3 / 4^{\prime \prime}$ at the bottom)
Knobs- Diameter: $2 \not 1 / 8^{\prime \prime}$ Projection on door: $27 / 8^{\prime \prime}$

45HM IDH MAX ${ }^{\circledR}$ Mortise \#4, \#6 knobs: M aterial machined from brass or bronze.
Lever handle- Brass, bronze or stainless steel. (Lever \#3, \#14 and \#15 conform to California Titles 19 and 24.)
Mounting- Knob and lever attached with hardened set screw on inside knob or inside lever.
Finish- 605-bright brass, clear coated; 606-satin brass, clear coated; 611-bright bronze, clear coated; 612-satin bronze, clear coated;
613-oxidized satin bronze, oil rubbed; 625-bright chromium plated; 626 -satin chromium plated; 629 -bright stainless steel;
630-satin stainless steel; 690**-dark bronze.

* 613 finish is designed to wear over time, providing an "antique" appearance.
** 690 finish will continue as a dark brown appearance over time.
Antimic robial Finishes 626AM - Satin Chrome Plated with UltraShield Antimic robial coating; 630AM - Satin Stainless Steel with UltraShield Antimicrobial coating

## ELECTRONIC

M aximum current draw : 1.1 Amp for 50 milliseconds Typical current draw (hold condition): 650 milliAmps Voltage: 10.2 to 13.2 V (DC only)
Magnetic Stripe Card Reader:
Read Rate: 5 inches per second to 50 inches per second.
Card thickness: ISO standard .030 " $\pm .003$ thick. Compliance to FCC, Canadian, and European EM C requirements; for interference FCC Class A digital apparatus.

## Proximity Reader:

ANSI/BHM A A156.25 compliant. Compatible with M otorola / Indala and HID proximity cards. ABA and W iegand output. W eatherproof bezel and gasket provide protection for outdoor use. (Usable in most environmental/exterior applications) Card Read Range: 0 - 3 inches. Compliance to US FCC, Canadian FCC, and European EM C requirements
ESD Protection: 15 Kilo Volt

## 9KM IDH MAX - SPECIFICATIONS MECHANICAL

Materials- Internal parts are brass, zinc or corrosion-treated steel.
Chassis- $21 / 16^{\prime \prime}$ diameter to fit $21 / 8^{\prime \prime}$ diameter hole in door.
Strike- Brass, bronze, or stainless steel base material; STK $23 / 4^{\prime \prime} \mathrm{H}$ standard, S3 $47 / 8^{\prime \prime} \mathrm{H}$.
Fits standard door frame cut out as specified in ANSI A115.1. Strike box supplied as standard.
Backset- $23 / 4^{\prime \prime}$ standard, $3 / 4^{\prime \prime}$ and $5^{\prime \prime}$ available.
Door thickness- Standard lock configuration designed for doors $13 / 4^{\prime \prime}-21 / 4^{\prime \prime}$ thick.
Installation- Lock dimensions requires modified door prep ANSI A156.2 Series 4000, Grade 1
to mount housing.
Latchbolt- $9 / 11^{\prime \prime}$ throw.
Escutcheons: $10^{1 / 22^{\prime \prime}} \mathrm{H} \times 3^{5 / 16^{\prime \prime}} \mathrm{W} \times 1^{\prime \prime} \mathrm{D}\left(1^{\prime \prime}\right.$ at the top, sloping down to $3 / 4^{\prime \prime}$ at the bottom).
Knobs- Diameter: $21 / 8^{\prime \prime}$ Projection on door: $27 / 8^{\prime \prime} \# 4$, \#6 knobs: M aterial machined from brass or bronze.
Lever handle- M ade from high-quality zinc alloy. Body is approximately $15 / 8^{\prime \prime}$ in diameter:
Handle is approximately $43 / 4^{\prime \prime}$ in length (from center-line of chassis). Lever styles 14 and 15 return to a minimum of $1 / 2^{\prime \prime}$ of door surface. Lever 16 does not return.
Finish- 605-bright brass, clear coated; 606-satin brass, clear coated; 611-bright bronze, clear
coated; 612-satin bronze, clear coated; 613*-oxidized satin bronze, oil rubbed 625-bright chromium

93KM IDH MAX ${ }^{\circledR}$ Cylindrical plated; 626-satin chromium plated; 690**-dark bronze.

* 613 finish is designed to wear over time, providing an "antique" appearance.
** 690 finish will continue as a dark brown appearance over time.
Antimicrobial Finishes
626AM - Satin Chrome Plated with UltraShield Antimicrobial coating
630AM - Satin Stainless Steel with UltraShield Antimic robial coating
ELECTRONIC
Maximum current draw : 850 MilliAmps, for 50 milliseconds
Typical current draw (hold condition): 550 milliAmps
Voltage: 10.2 to 13.2 V (DC only)
Magnetic Stripe Card Reader:
Read Rate: 5 inches per second to 50 inches per second.
Card thickness: ISO standard $.030^{\prime \prime} \pm .003$ thick. Compliance to FCC, Canadian, and European EM C requirements; for interference FCC Class A digital apparatus.
Proximity Reader:
ANSI/BHM A A 156.25 compliant, Compatible with M otorola / Indala and HID proximity cards, ABA and W iegand output Weatherproof bezel
and gasket provide protection for outdoor use. (Usable in most environmental/exterior applications).
Card Read Range: 0-3 inches. Compliance to US FCC, Canadian FCC, and European EM C requirements
ESD Protection: 15 Kilo Volt

Shading indicates a ridged lever／knob in a non－energized state．

## 40HW／8KW／9KW ELECTRIFIED LOCKINTRODUCTION

The 40HW，8KW，and 9KW electromechanical locks provide fail－safe（electric ally locked）and fail－secure（electrically unlocked）operation． They also provide a way to lock and unlock the door from a remote location for safety，security，or convenience through an individual switch， switch lock，relay，access control system，or other automatic control system．M ore importantly，these locks exhibit the same features and meet the same standards and specifications as our mechanical 40 H mortise and $8 \mathrm{~K} / 9 \mathrm{~K}$ heavy duty cylindrical locksets．

HOW TO ORDER STANLEY QUICKCONNECT PRE－WIRED PLUG－IN CONNECTORS

To order the Stanley Quick Connect pre－wired plug－in connectors，include the＂C＂suffix for the BEST Locks．
See page 24 for more details on how the Stanley Quick Connect systems works．

Example： BEST Locks 45HW 7 DEL 14H 626 RH DSC

BEST Locks
9KW 37 DEU 15CS TK 62624 VC

Types：
－ 12 volts $A C$ or $D C-0.60 \mathrm{amps}$
－ 24 volts AC or DC－ 0.45 amps
－All EU functions：Electrically Unlocked（Fail Secure）
－All EL functions：Electrically Locked（Fail Safe）

## Approval Listings：

－UL listed for GYQS Electrically－controlled singlepoint locks or latches．
－This product has been approved by the California State Fire M arshal（CSFM） pursuant to section 13144.1 of the California Health and Safety Code．
－Approved by the city of New York Board of Standards and Appeals under calendar number 49－88－SA．See CSFM listing No．4136－1175：101 for allowable values and／or conditions fo use concerning material presented in this document．It is subject to re－examination，revisions and possible cancellation．
NOTE：All w－series locks require the use of a（TCM ）Temperature Control M odule． TCM and TCM connector are supplied standard with every order．

8KW \& 9KW ELECTRIFIED LOCKS - SPECIFICATIONS
Types:

- 12 volts AC/DC when used with supplied TCM -0.50 amps
- 24 volts AC/DC when used with supplied TCM -0.18 amps
- All EU functions: Electrically Unlocked (Fail Secure)
- All EL functions: Electric ally Locked (Fail Safe)

## Approval Listings:

- UL listed for GYQS Electrically-controlled singlepoint locks or latches.
- This product has been approved by the California State Fire M arshal (CSFM) pursuant to section 13144.1 of the California Health and Safety Code.
- Approved by the city of New York Board of Standards and Appeals under calendar number 730-89-SA. See CSFM listing No. 4136-1175:103. It is subject to re-examination, revision and possible cancellation.

## Door thickness:

Standard lock configuration designed for doors $13 / 4^{\prime \prime}-2 \frac{1}{4} 4^{\prime \prime}$ thick.
NOTE: All W-series locks require the use of a (TCM ) Temperature Control M odule. A TCM and TCM connector are supplied standard with every order.

93KW Cylindrical Electric ally-Operated Lockset

## ELECTRIFIED ACCESSORIES 8W 599

## Features:

- Offers exceptionally high power for its compact size
- UL listed
- Thermally fused
- Convenient 4 point mounting provision allows rapid installation in a standard $1 / 2$ " knockout
- Foot-mounts for surface installation
- Pre-stripped pigtails provided for quick primary connection
- Secondary connection by screw terminals
- Sturdy nylon bobbin construction
- Cadmium plated finish

Specifications:
Primary voltage: 120 VAC (Wire Leads)
Sec ondary voltage: 24 VAC (Screw Terminals)
Secondary VA: 40 volts-amperes
Dimensions: $21 / 4^{\prime \prime} \times 21 / 8^{\prime \prime} \times 215 / 16^{\prime \prime}$
To order specify: 8W 599

## 8W CON

Features:

- 400 A mpere surge capability
- Electrically isolated base
- UL recognized
- Single-phase, full wave bridge

## Specifications:

Average forw ard current: 25 amps
Case: Plastic case with an electrically isolated aluminum base
Polarity: Terminal designation embossed on case: $+D C$ output, - $D C$ output, $A C$ not marked M ounting position: B olt down. Gain the highest heat transfer efficiency through the surface opposite the terminals. Use silicone heat sink compound on mounting surface for maximum heat transfer.

AC to DC Converter
Full w ave bridge rectifier

Terminals: Suitable for "fast-on" connections. Readily solderable and corrosion resistant. Soldering is recommended for applications greater than15 amperes.

Mounting torque: 20 inch-pounds maximum
Case size: $1.030 \times 1.030$ inches
Temperature range: $-85^{\circ}$ to $347^{\circ} \mathrm{F}\left(-65^{\circ}\right.$ to $\left.+175^{\circ} \mathrm{C}\right)$
To order specify: 8W CON

## Function/Application:

Converts AC (alternating current) to DC (direct current) for locking circuit applications. (Typically used with 8W 599 transformer.)

## 8W BU-1-A / 8W BU-1-N

## Features:

- Positive "snap" feedback
- Industrial-grade switch designed for rugged control applications.
- Factory assembled with trimplate
- Standard or narrow plate available
- $13 / 16^{\prime \prime}$ dia. mushroom head - red in color

## Specifications:

Electric al rating: 28VDC or $115 \mathrm{VAC}, 10 \mathrm{~A}$ resistive, 5 A inductive, 3 A lamp load (see terminology on the back cover)
Sw itch type: SPST-N O-DB, FORM-X contacts, 25,000 cycles at full load, 50,000 cycles mechanical life
M ounting hole: $5 / 8^{\prime \prime}(.625)$ dia.
Sw itch dim.: 1.187 dia.x 1.528 overall length
Standard w all plate: $23 / 4^{\prime \prime} \times 41 / 2^{\prime \prime}$
Narrow w all plate: $1 \frac{1}{2 \prime \prime} \times 41 / 2^{\prime \prime}$
M aterial/finish: Satin stainless steel
Wire leads: Two $6^{\prime \prime}$ long 20 AW G insulated wire leads
To order specify: 8W BU-1-A standard plate 8W BU-1-N narrow plate

## Function/Application:

Normally open push-button switch provides momentary sw itch closure when pressed. Typically used to momentarily energize electrified locks or strikes or used as a request-to-exit switch on access control systems.

8WBU-1-A
Standard plate

8WBU-1-N
Narrow plate

## Features

- All circuitry completely sealed

## Specifications

Wire leads:
Input-24 AW G - Stranded wire with PVC insulation (approx. $44^{\prime \prime}$ in length) Output - 24 AWG - Stranded wire with Teflon insulation (approx. $2.6^{\prime \prime}$ in length)
Input Voltage: 12 or 24 volts AC or DC
Output Voltage: Full voltage out @ 1 amp maximum for 0.5 seconds then $30 \%$ of voltage out for 5 seconds
Output protection: Short circuit current limiting set at one (1) amp.

Operating temp: -4 to $158^{\circ} \mathrm{F}\left(-20\right.$ to $\left.70^{\circ} \mathrm{C}\right)$
Size: $1 / 2^{\prime \prime} \times 21 / 4^{\prime \prime} \times 1 / 2^{\prime \prime}$

## Function/Application

A temperature control module (TCM ) reduces the amount of current flow to a lockset one second after energizing, thereby low ering the temperature of the lockset trim. A (TCM ) also converts AC pow er to DC power and should be used on all electrified mortise and cylindrical locksets.
NOTE: The TCM is not used with any IDH-M ax function.

## TERMINOLOGY

Closed - A state in which a connection exists betw een the common terminal and another terminal on the switch. See Open also.
Common terminal - A terminal on a switch whose contact can be connected to one or more terminals on the switch.
Door status - A switch that monitors whether the door is open or closed. This switch is used to detect a forced entry, or a door that is propped open.
Inductive load - An electrical device such as a motor, relay, or solenoid.
NOTE: this type of load can cause arcing across switch contacts and may burn the contacts. See Resistive load and Lamp load also.
Latchbolt status - A sw itch that monitors whether the latch is engaged or retracted. This switch is used to detect a forced entry, or a latch that has been taped open.
Lamp load - An electrical device that produces light using a tungsten filament, such as an incandescent light bulb. Note: this type of load can cause surges of current upon contact closure. This may cause the contacts to weld together. See Inductive load and Resistive load also.
Maintained - Remaining in a given state until the switch lever or button is actuated. Actuating the switch lever or button causes the switch to change to another maintained state.
Momentary - Remaining in a given state only as long as an external force is applied to the switch lever or button.
NC - (Normally Closed) Switch contacts that are closed as long as no external force is applied to the switch lever or button.
NO - (Normally Open) Switch contacts that are open as long as no external force is applied to the switch lever or button.
Open - A state in which no connection exists between the common terminal or any other terminal on the switch.
Pole - The number of independent circuits in a switch. For example, a double-pole, single-throw switch can control two separately powered motors. See Throw also.
Resistive load - An electrical device, such as a heater, having none of the characteristics of an inductive or lamp load. This type of load is the least severe on the switch because only a small amount of arcing occurs when the switch contacts open and close. See Inductive load and Lamp load also.
RQE - Request-to-exit. A switch that allows the user to exit without setting off an alarm. Turning the inside knob or lever actuates the switch and, when wired to an alarm system, sends a signal to disable or sound an alarm, start a timer, etc.
Throw - The number of circuits, or contacts controlled by each pole. For example, a single-pole, double-throw switch can control a motor with two contacts- a forward contact, and a reverse contact. See Pole also.
1300 - Integrated BAS1300/LNL1300 reader electronics board or (ISC) Intelligent System Controller is embedded behind the escutcheon secured and out of site. Functions with B.A.S.I.S./M ercury on-line equipment only.

## ELECTRIC SWITCH LOCK－INTRODUCTION

Stanley Security Solutions offers a line of electric switch locks available in various＂on－off＂and＂momentary＂keyed switch functions． Circuitry variations are available in single，double and triple pole with varied voltage and amperage ratings．Units may be keyed into any $\mathrm{BEST}^{\circledR}$ system．The BEST interchangeable core offers versatility and adaptability for new and existing electrical controls，panels， machines，etc．

## Features

－Double D lock cylinder prevents slipping and turning
－Screw terminals on all switch locks（except the 1W 7A1）provides ease of installation
－All sw itches are UL recognized or listed
Note on functionality：Switch lock keys can only be removed in the $120^{\prime}$ clock position．

## How to select a switch lock

1．Determine the electrical requirements for the device being controlled：
A．Voltage（for example： 115 VAC or 24 VDC）
B．Current or horsepow er（for example： 6 amps or $1 / 2$ horsepower）
C．Type of load
－Resistive（for example，heater elements）
－Inductive（for example，motors，large transformers）
－Lamp（for example，incandescent lights）
2．Determine the switch configuration（poles and throws）and key removal condition：
A．Poles To determine the number of poles，find how many wires from the power source need to be switched on and off by the switch lock．
B．Throw s To determine the number of throws，find how many wires to the device the switch needs to control．For example，if a switch needs two different＂on＂conditions（low and high speed），two throws are needed．Or if the device is simply an＂on－off＂ type（only one wire），you need one throw．
NOTE：A switch throw may be left unwired and used as an＂off＂condition．
C．Key removal To determine the key removal condition，ask the question，＂W hen the key is removed，should the switch be＂off＂，or could the switch be either＂on＂or＂off＂？＂Although the key can only be removed in the $12 \mathrm{o}^{\prime}$ clock position，the switch itself may be left in two or three positions．Check each switch lock for key removal sw itch positions．
3．Use the information collected and find the switch lock that best meets the requirements．Refer to the following catalog pages for a description of each switch lock．If environmental conditions make it necessary that the sw itch lock be housed in an electrical box，see the Optional boxes below for the box that best suits the switch lock and your application．

## OPTIONALBOXES

Stanley Quick Connect plug-in connectors must be used with the following components to work as a complete plug-and-play system:
1.Specify appropriate PRECISION or BEST electrified products
2. Specify correct wire harness length from door hardw are to electric power transfer device or electrified hinge
3. Specify either the NEW electric power transfer (EPT-12C) or the NEW electrified hinge (CECB179-12C)
4. Specify correct wire harness length from power transfer or electrified hinge to wire extension (W H-6E)
5. Choose wire harness extension to connect to power source

## HOW TO ORDER

To order the StanleyQuick Connect pre-w ired plug-in connectors, include the "C" suffix for the BEST electrified locks. See example below.

Stanley Security Solutions, a business division of Stanley Black \& Decker, is a provider of integrated access control and security solutions for institutional, commercial and industrial businesses and organizations. Stanley Security Solutions delivers a comprehensive suite of security products, software and integrated systems with a strong emphasis on service. Stanley Security Solutions is committed to extending its position as a leading comprehensive resource for a broad an d extensive array of solutions that span the entire security spectrum.
